

Mobile Access Platform Provides Container Access Solution

Our customer Corporate Moves provides relocating, installing and recycling services for organisations across the UK. Regularly using containers for storage, they required a solution that would enable to reach containers on multiple levels. Our Mobile Double Decker Access Platform solved the problem.

“We are very pleased with the Klime-Ezee Mobile Double Decker Access Platform. It has been used to tackle the main job of accessing raised storage containers and enables it to be done in a much safer manner. Thank you for all your help and efficient service” said Alistair at Corporate Moves.

The Mobile Double Decker Access Platform is based on our popular mobile warehouse steps range and has many of the same features. The platform has two 100mm rear wheels and two retractable front castors which are lifted from the floor using a braking retractor handle which allows the large steel feet to impact with the floor and give maximum stability for the operator. The large top platform makes loading and unloading both comfortable and safe. The platform can be straightforwardly tailored to suit variable platform heights and site specific requirements.

If you would like to find out more about our range of Mobile Access Platforms or would like to discuss your requirements, call Jacky on 01204 590 232 or email jacky@ladderstore.com.
